Process acceleration

Accreditation acceleration

Weaver Capital consulted to Sanas on the automation of the national accreditation system.

Problems experienced before the solution included slowness of the process and inability to easily trace source and proof documents.

Our solution included :

1. Storage of all proof documents to the Liberty Net EDMS solution.
2. Capturing of documents and data in real time using the automated TeleForm system.
3. Automated communications requesting outstanding information and steps.

4. Automated workflow for tracking progress and accreditation.

The Result

The result was a reduction of process by 80%, increased control over the accreditation process, and real time retrieval possibility on source and proof documents thus enhancing compliance.

Automated communications also dramatically accelerated data collection and eventual accreditation..
